

SPECIFICATION AMENDMENTS

Please replace paragraph [0020] with the following amended paragraph:

[0020] CPU 102 may be implemented by any type and number of processors, depending upon the requirements of a particular implementation, and the invention is not limited to any particular implementation. RAM 104 may be implemented by as one or more volatile memories of any type. RAM 104 is generally configured to store data and instructions that can be processed by CPU 102. For example, RAM 104 may contain data and executable programs to perform the various functions provided by MFP 100.

Please replace paragraph [0022] with the following amended paragraph:

[0022] Application programs 112 include any type or number of application programs that may be executed on MFP 100. Examples of application programs 112 include, without limitation, communications programs, configuration programs, as well as other applications for performing the functionality supported by MFP 100. Configuration data 114 includes any data used in the configuration of MFP 100. Examples of other data 116 include, without limitation, temporary data used by application programs 112, status and statistical data for MFP 100, such as page count, levels of consumables and error and fault data, operating system data and data received from other network devices.
